

The Royal Institution

Our partnership with The Royal Institution (Ri) is focused on the Urenco Young Scientist Centre (UYSC), an interactive and imaginative science laboratory offering a unique opportunity for school students to explore science through focused workshops. Over 4,000 students and families visit this purpose-built laboratory annually. The Ri team provides experiences that inspire curiosity and foster a love of learning.

Urenco support is helping to bring science to life in the most compelling way and offers young people from all backgrounds a fascinating insight into life as a scientist and the exciting possibilities of a career in STEM (science, technology, engineering and maths).

The Ri is a home for science and everyone is welcome. The UYSC, located in our iconic building in the heart of London, offers engaging, curriculum-linked workshops for school students and families. We're looking forward to working together, developing additional workshops and continuing to extend the Centre's reach, further inspiring the next generation of scientists and engineers.

Katherine Mathieson

Director, The Royal Institution

The Ri brings the public and scientists together to share their interest and passion for science, empowering people to explore and get involved. Its vision is that science is for everyone.

An independent registered charity, founded in 1799, the Ri provides science education, public engagement, and heritage activities for people of all ages and backgrounds across the UK and around the world. These activities include the world-famous Christmas lectures; public talks from the world's greatest thinkers; Ri Masterclasses in mathematics and computer science; UYSC science workshops; and the preservation of its scientific heritage through the Faraday Museum and archival collections.

Sustainability Spotlight

This project aligns with the Urenco sustainability strategy, our corporate values and UN Sustainable Development Goals.

Education and skills:

- Increase STEM knowledge and interest in young people
- Sponsor the STEM specialist education lab within the Ri
- Extend understanding of sustainable nuclear energy by co-creating a new themed workshop.

Community engagement:

- Promote diversity and opportunity for all by engaging under-represented groups to visit the UYSC.

UN Sustainable Development Goals:
